Erin Van Brunt

Digital Accessibility Specialist | Accessibility QA Tester

Santa Cruz, CA | ErinMontyBruce@gmail.com
Accessibility & Development Portfolio | LinkedIn Profile | GitHub Projects | Medium Articles

---

Professional Summary

Digital accessibility specialist with a background in full-stack software engineering and hands-on experience testing, debugging, and improving web applications. Trained in WCAG principles, inclusive design, and accessibility evaluation, with practical experience in automated testing and technical documentation. Combines a developer's perspective with a quality-focused approach to identifying accessibility barriers and creating more inclusive digital experiences.

Core Skills

Accessibility & Inclusive Design: WCAG 2.2 Level A/AA, Universal Design principles, Universal Design for Learning (UDL), disability models and barriers, assistive technology concepts, disability etiquette, accessibility laws and standards (ADA, Section 508), inclusive design, semantic HTML, ARIA fundamentals, accessible names and landmarks, color contrast, zoom and reflow accessibility

Accessibility QA & Testing: Manual accessibility evaluation, keyboard navigation and focus testing, Safari VoiceOver screen reader testing, WCAG success criterion mapping, accessibility defect documentation, remediation recommendations, functional and regression testing, Playwright, axe-core, axe DevTools, WAVE, Vitest, React Testing Library, Chrome DevTools, cross-browser testing, CI/CD quality checks

Programming Languages & Frameworks: HTML5, CSS3, JavaScript (ES6+), TypeScript, Python, SQL, Ruby, Java, React, Next.js, Astro, Node.js, Express.js, Flask, Ruby on Rails

Full-Stack Development & Tools: RESTful APIs, PostgreSQL, MySQL, MongoDB, Redis, Docker, Git/GitHub, Linux CLI, AWS EC2, Postman, OAuth, JWT authentication, Bitbucket Pipelines, responsive web development, technical documentation, developer collaboration

Accessibility QA Projects

Independent Accessibility Audits | October 2026–Present

Personal Portfolio — WCAG 2.2 Accessibility Evaluation

- Conducted a targeted accessibility audit using manual keyboard testing, Safari VoiceOver, semantic HTML inspection, responsive and contrast evaluation, and automated testing with Playwright and axe-core.
- Evaluated WCAG 2.2 Level A/AA success criteria and produced detailed reports documenting test methods, results, observations, and evaluation limitations.

Scotts Valley Market — Independent Accessibility Evaluation

- Conducted manual keyboard accessibility evaluations of website navigation, interactive components, product pages, and shopping cart interactions against selected WCAG 2.2 Level A/AA success criteria.
- Identified and documented accessibility barriers involving keyboard operability, focus visibility, focus management, and accessible names, mapping findings to applicable WCAG success criteria and recommending remediation.

Experience

Software Engineering Intern | Aeyesafe | June–September 2025

- Implemented the frontend testing foundation with Vitest and jsdom, creating routing and rendering tests and mocks for browser APIs and application providers.
- Integrated automated tests into Husky pre-commit hooks and Bitbucket Pipelines, confirming that failing tests blocked commits before code review and merge.
- Audited more than 100 files, identified and safely removed dead code, consolidated the application's icons into Phosphor, and removed redundant third-party packages.
- Created a global CSS system, standardized large portions of inconsistent legacy styling, and built API-connected dashboard tables with pagination.

Software Engineering Intern | Digital Factory | January–June 2025

- Built the functional foundation of a new internal admin portal using Next.js, Appwrite, and Flask, including registration, login, logout, session persistence, protected routes, token handling, and error states.
- Connected the portal first to mock account data and then to the Zeus backend, establishing a working frontend-to-backend integration.
- Reconstructed and documented a complex local backend environment using Docker, Flask, PostgreSQL, MongoDB, Redis, Pipenv, and multiple microservices.
- Investigated a deeply outdated legacy website, identified major integration and maintenance risks, and contributed to a proposal recommending a full rebuild rather than continued patching.

Layout Engineer | Analog Devices | 2011–2014 | San Jose, CA

- Created and optimized more than 50 analog and digital IC layouts using Cadence Virtuoso.
- Performed DRC and LVS verification to identify layout errors, support design-rule compliance, and improve overall accuracy.

Restaurant Manager | Pacific Northwest & Southwest U.S. | 2014–2025

- Led and trained teams of 15+ employees while managing scheduling, staffing, inventory, bookkeeping, and daily operations.
- Improved workflows and team performance, contributing to a 20% increase in sales while maintaining health and safety compliance.

Education & Certifications

University of Washington: Web & Digital Accessibility, completed July 2026
Deque University: Web Accessibility Specialist (WAS) Preparation, Certificate of Completion, 2026
Deque University: CPACC Preparation, in progress; exam scheduled Nov. 2026
Western Governors University: Python Course, 2025
Arizona State University: Principles of Programming with Java, 2023
Flatiron School: Full-Stack Software Engineering Certificate, 2022
General Assembly: Software Engineering Immersive Certificate, 2021
Silicon Design Institute: Mask Design / Layout Engineering, 2011–2013
