Portfolio Accessibility Audit — Automated Accessibility Evaluation

> **Website:** Erin Van Brunt Portfolio
> **URL:** https://van-brunt-portfolio.vercel.app/
> **Evaluated route:** `/` (local Home page only)
> **Evaluation Date:** November 3, 2026
> **Standard:** WCAG 2.2 Level A/AA (configured automated rule set)
> **Environment:** Chromium on macOS; local Astro development server
> **Tools:** Playwright (`@playwright/test`), axe-core (`@axe-core/playwright`)
> **Evaluator:** Erin Van Brunt

1. Evaluation Scope

Automated accessibility evaluation of the portfolio **Home page** at `http://127.0.0.1:4321/`, including the rendered Home content and shared header, navigation, and footer present in the loaded document. This report covers **only the Home route (`/`)**; no other pages were evaluated in this run.

The browser loaded the route, confirmed a successful HTTP response, and executed axe-core on the rendered page. This was an automated, page-load snapshot; no manual keyboard, VoiceOver, visual, or interactive-state testing was performed as part of this run.

2. Automated Testing Method

Playwright opened `/` in Chromium with `page.goto("/")` and asserted a successful HTTP response. axe-core then analyzed the rendered document at page load.

The scan selected rule tags `wcag2a`, `wcag2aa`, `wcag21a`, `wcag21aa`, and `wcag22aa`. The test asserted `results.violations.length === 0`, while recording all passing, violated, incomplete, and inapplicable rules plus incomplete node explanations.

3. Automated Test Results

Reported outcome	Result
Playwright route test	**PASS — 1 test passed**
axe-core passing rules	**19**
axe-core violated rules	**0**
axe-core incomplete rules	**1** (color-contrast; 9 nodes)
axe-core inapplicable rules	**45**

Execution: November 3, 2026, 20:50:54–20:51:06 UTC (12:50–12:51 PST). Counts represent axe-core rule outcomes, not a count of all WCAG success criteria passed.

4. axe-core Rule-Level Evidence

All 19 rules below were reported in axe-core's **passes** category for the Home page. Descriptions summarize the checks; a passing rule does not by itself establish complete conformance with the related WCAG criterion.

axe-core rule ID	Automated check represented	Result
`aria-allowed-attr`	ARIA attributes supported by assigned roles	**PASS**
`aria-conditional-attr`	Conditional ARIA attribute usage	**PASS**
`aria-hidden-body`	Document body not hidden from assistive technology	**PASS**
`aria-hidden-focus`	Hidden elements are not focusable	**PASS**
`aria-prohibited-attr`	No prohibited ARIA attributes for roles	**PASS**
`aria-valid-attr-value`	ARIA attribute values are valid	**PASS**
`aria-valid-attr`	ARIA attribute names are valid	**PASS**
`bypass`	A mechanism exists to bypass repeated navigation	**PASS**
`color-contrast`	Contrast checks completed on determinable nodes*	**PASS**
`document-title`	Non-empty document title	**PASS**
`duplicate-id-aria`	Unique IDs used for ARIA references and labels	**PASS**
`html-has-lang`	Document declares a language	**PASS**
`html-lang-valid`	Document language value is valid	**PASS**
`image-alt`	Images provide alt text or decorative treatment	**PASS**
`link-name`	Links have discernible accessible names	**PASS**
`list`	List elements are structured correctly	**PASS**
`listitem`	List items have appropriate list parents	**PASS**
`meta-viewport`	Viewport does not disable zoom or text scaling	**PASS**
`target-size`	Pointer targets meet applicable sizing/ spacing checks	**PASS**

***Contrast qualification:** `color-contrast` appears in both the **passes** and **incomplete** categories. Some evaluated elements passed; axe-core could not calculate results for nine other elements. See Section 5. The 45 inapplicable rules had no applicable targets in this scan; they are not counted as passes.

5. Documented Observations

The only incomplete rule was `color-contrast`. It affected **nine rendered elements** and requires judgment or supplemental review; axe-core did **not** classify these items as violations.

OBS-AUTO-001 — Gradient backgrounds (6 elements)

axe-core could not determine the background color because the listed text elements appear over a background gradient:

- `.hero__eyebrow`
- `#hero-heading > span:nth-child(2)`
- `#hero-heading > span:nth-child(3)`
- `span:nth-child(4)`
- `.hero__description`
- `.hero__cta > span:nth-child(1)`

Disposition: INCOMPLETE — Contrast cannot be concluded from this automated scan. Assess relevant text/background combinations independently, including responsive image and gradient states.

OBS-AUTO-002 — Decorative arrow glyphs (3 elements)

axe-core reported that these elements contain only non-text characters:

- `.hero__cta-arrow`
- `.footer__linkedin > .footer__contact-arrow[aria-hidden="true"]`
- `.footer__contact > .footer__contact-arrow[aria-hidden="true"]`

Disposition: INCOMPLETE — These glyphs are not automatically proven to fail. Confirm whether any convey essential meaning or require non-text contrast consideration; the two footer arrow elements are marked `aria-hidden="true"`.

6. Evaluation Boundary

This run assessed only detectable axe-core rules on the rendered Home page in Chromium. It did not exercise keyboard focus behavior, activate the skip link, inspect VoiceOver announcements, test responsive states, or manually verify contrast. The separately documented keyboard, semantic HTML, and visual/VoiceOver evaluations provide complementary evidence but are **not repeated or re-scored** in this report.

7. Final Automated Accessibility Verdict

> **RESULT: PASS — No automatically detectable WCAG A/AA violations reported in the tested Home page scope.**
>
> **Automated rule findings:** 19 passes; 0 violations; 1 incomplete rule (9 elements); 45 inapplicable rules.
>
> **Conclusion:** The Home page passed the configured Playwright/axe-core test. Its incomplete contrast checks remain review items, not confirmed WCAG failures.

Evaluation status: COMPLETE — AUTOMATED HOME PAGE PHASE. This report is not a statement of full WCAG 2.2 Level AA conformance or an assessment of other portfolio routes.
