Portfolio Accessibility Audit — Visual, VoiceOver & Automated Evaluation

> **Website:** Erin Van Brunt Portfolio
> **URL:** https://van-brunt-portfolio.vercel.app/
> **Evaluation Period:** October 2026
> **Standard:** WCAG 2.2 Level AA (target)
> **Environment:** Chrome and Safari on macOS; Chrome DevTools; Safari with VoiceOver
> **Tools:** Browser testing, CSS/source review, axe DevTools, WAVE, VoiceOver
> **Evaluator:** Erin Van Brunt

1. Evaluation Scope

Targeted evaluation of the portfolio Home page, including the shared Navbar (header/navigation), hero content, and Footer. This phase assessed visual accessibility, responsive behavior, zoom and text spacing, pointer interaction, Safari + VoiceOver announcements, automated scanner findings, and selected cross-page consistency checks.

The third-party Vercel feedback widget and external destinations were excluded. The previously completed *Keyboard Evaluation* and *Semantic HTML Evaluation* are separate records; their tests were not repeated here.

2. Visual Accessibility & Responsive Testing Results

Test / WCAG criterion	Result	Observed evidence
Use of Color — 1.4.1 (A)	**PASS**	Grayscale review retained navigation state, link identification, and hero meaning.
Contrast (Minimum) — 1.4.3 (AA)	**PASS***	Solid color pairs passed calculation. Mobile hero screenshot sampling yielded about 5.34:1 for the small accent text and 5.17:1 for the large heading.
Non-text Contrast — 1.4.11 (AA)	**PASS***	Essential tested control borders and focus indicators met the minimum against solid theme surfaces.
Resize Text — 1.4.4 (AA)	**PASS**	At 200% Chrome zoom, tested content and controls remained visible and usable.
Reflow — 1.4.10 (AA)	**PASS**	At 320 CSS px, content wrapped; measured document scroll width equaled client width.
Text Spacing — 1.4.12 (AA)	**PASS**	Injected WCAG spacing values caused no observed text clipping or loss of content.
Orientation — 1.3.4 (AA)	**PASS**	iPhone SE landscape emulation showed navigation, hero, CTA, and footer usable.

Selected measurements: Theme colors yield about 17.0:1 for primary text (#f4f1ea) on #0d0f10, 11.9:1 for secondary text (#d5d0c8) on #131517, and 3.55:1 for the essential strong border (#686e74) on #131517. ***PASS applies to sampled colors and elements; not all photo crops or decorative borders were measured. See Section 8.

3. Pointer Interaction & Target Size

Test / WCAG criterion	Result	Observed evidence
Pointer Cancellation — 2.5.2 (A)	**PASS***	Pressed the “View my resume” link, moved outside it, then released; no navigation occurred.
Target Size (Minimum) — 2.5.8 (AA)	**PASS**	Eight queried first-party links measured at least 136 × 44 CSS px at the 320 px viewport; the CTA measured 280 × 46 px.
Pointer Gestures / Dragging — 2.5.1, 2.5.7	NOT APPLICABLE	No multipoint/path-based gestures or dragging functions were identified in the reviewed components.

***Pointer cancellation was observed directly on the CTA. Other reviewed navigation controls use standard HTML links without custom pointer handlers in the supplied source.

4. Safari + VoiceOver Evaluation

VoiceOver testing used Safari on macOS. A page walkthrough and focused follow-ups inspected the announced landmarks, heading, skip mechanism, links, current-page state, and reading sequence.

Screen reader check	Result	Observed announcement / behavior
Skip to Main Content	**PASS**	Announced as a link; activation brought navigation to the main region.
Navigation landmark	**PASS**	“Primary navigation” announced as a navigation region.
Navigation list and brand link	**PASS**	Four-item list and “Erin Van Brunt, home” link announced.
Current page state	**PASS**	“Current page, visited link, Home” announced on Home.
Main landmark and hero region	**PASS**	Main region and labeled hero region recognized.
Primary heading	**PASS**	Announced as “heading level 1” with the full heading content.
Resume CTA and footer links	**PASS**	“View my resume,” “LinkedIn,” and “Email Me” were read as links.
Reading sequence	**PASS***	Navigation, heading, body copy, CTA, and footer were encountered in a meaningful sequence.

Observation: VoiceOver repeated the hero heading when entering its labeled region and when reading the heading. The repetition is likely related to `aria-labelledby="hero-heading"`; no WCAG failure was confirmed. ***The result reflects the walkthrough and targeted interactions, not exhaustive assistive-technology coverage.

5. Automated Accessibility Tool Results

The two scans provided supplemental evidence. Automated results were reviewed together with manual and screen-reader testing; an empty issue list does not establish complete WCAG conformance.

Tool	Recorded result	Interpretation
axe DevTools Chrome extension	**0 automatic issues** 0 critical / serious / moderate / minor	Scan was configured for WCAG 2.1 AA with Best Practices OFF. It did not represent a standalone WCAG 2.2 AA scan.
WAVE WebAIM evaluation	**0 errors** 0 contrast errors 1 alert AIM Score: 10/10	Alert identified redundant Home destinations: brand/home link and Home navigation link. This was investigated and was not classified as a WCAG failure.

Additional WAVE output: 5 accessibility features, 6 structural elements, and 12 ARIA annotations were reported. WAVE's "0 contrast errors" does not confirm all text-over-image contrast combinations.

6. Shared Components & Cross-Page Checks

Small consistency checks compared the Home and Resume pages. The shared Navbar and Footer were also evaluated more thoroughly in the earlier semantic and keyboard reports.

Test / WCAG criterion	Result	Evidence / boundary
Consistent Navigation — 3.2.3 (AA)	**PASS***	Home and Resume show Home → Resume → Audits → Blog in the same order.
Consistent Identification — 3.2.4 (AA)	**PASS***	Shared navigation and footer controls retain their labels and functions.
Consistent Help — 3.2.6 (A)	**PASS***	LinkedIn and Email Me remain in the same footer position on both pages.
Multiple Ways — 2.4.5 (AA)	**PASS***	Home links to the reviewed top-level pages; those pages provide a route back to Home. This follows the W3C small-site approach in Technique G185.

***Consistency checks compare Home and Resume. The Multiple Ways result covers the reviewed small top-level page set, not unreviewed nested routes. W3C Technique G185 describes when Home links can also function as a site map.

Automated Tool Disposition

No axe or WAVE results established a new WCAG failure in the evaluated Home page components. The WAVE redundant-link alert is documented as an advisory observation; it does not require removing either Home link to conform to WCAG.

7. WCAG 2.2 Level A/AA Assessment

The criteria below were assessed in this phase. Results apply to the inspected controls, viewports, and pages—not the entire portfolio. Prior keyboard and semantic criteria remain documented in their respective reports.

Success Criterion	Level	Verdict
1.3.4 Orientation	AA	**PASS (tested)**
1.4.1 Use of Color	A	**PASS (tested)**
1.4.3 Contrast (Minimum)	AA	**PASS (sampled)**
1.4.4 Resize Text	AA	**PASS (tested)**
1.4.10 Reflow	AA	**PASS (tested)**
1.4.11 Non-text Contrast	AA	**PASS (tested)**
1.4.12 Text Spacing	AA	**PASS (tested)**
2.5.2 Pointer Cancellation	A	**PASS (tested)**
2.5.8 Target Size (Minimum)	AA	**PASS (tested)**
3.2.3 Consistent Navigation	AA	**PASS (two pages)**
3.2.4 Consistent Identification	AA	**PASS (two pages)**
3.2.6 Consistent Help	A	**PASS (two pages)**
2.4.5 Multiple Ways	AA	**PASS (top-level set)**

8. Documented Observations & Follow-up

OBS-VIS-001 — Responsive hero image: preventive contrast guidance

At 320 CSS px, screenshot samples met AA contrast: about 5.34:1 for the small green text (4.5:1 required) and 5.17:1 for the large heading (3:1 required). The bright raw photograph (#FBC6A7 sample) would be insufficient alone; CSS overlays darken it. **Recommendation:** Preserve responsive dark tint/gradient as crops change; a text shadow may help. **Disposition:** Advisory. Other image/text positions were not sampled.

OBS-AT-001 — Repeated announcement of labeled hero region

VoiceOver repeated the H1 when entering the labeled hero region and at the heading. **Disposition:** Optional verbosity improvement; no WCAG failure confirmed.

OBS-AUTO-001 — WAVE flagged adjacent Home destinations

Brand/Home and Home navigation both point to /. **Disposition:** Investigated; non-failing advisory.

9. Final Evaluation Verdict

> **RESULT: NO CONFIRMED WCAG FAILURES IN THE TESTED SCOPE.**

No WCAG failures were confirmed in the evaluated Home, Navbar, and Footer. Contrast and Multiple Ways now have scoped PASS results; other image crops and nested pages were not evaluated.

Status: Targeted evaluation complete; not a full-site conformance declaration. Read alongside the separate keyboard and semantic reports. References: WCAG 2.2 and Technique G185 (W3C).
