Portfolio Accessibility Audit — Home Page Evaluation

Website: Erin Van Brunt Portfolio
URL: van-brunt-portfolio.vercel.app
Page evaluated: Home (/) and shared Navbar / Footer
Evaluation dates: October 21 - November 3, 2026
Standard: WCAG 2.2 Level A/AA (target)
Evaluator: Erin Van Brunt

1. Executive Summary

A targeted accessibility evaluation was completed for the Home page of the Erin Van Brunt professional portfolio. Four documented testing phases examined keyboard interaction, semantic HTML, visual and responsive presentation, Safari with VoiceOver, and automated accessibility results.

OVERALL RESULT: No confirmed WCAG 2.2 Level A or AA failures were identified within the documented Home page testing scope.

Manual keyboard testing passed six assessed Success Criteria; semantic HTML inspection passed nine. Visual, pointer, responsive, and VoiceOver checks produced no confirmed failures in the examined elements and states. The final Playwright/axe-core run returned zero detected violations. Minor usability and advisory observations were retained without classifying them as WCAG failures.

The conclusion is deliberately scoped: this is not a full-site WCAG 2.2 Level AA conformance declaration. The underlying four evaluation PDFs remain the technical record for test conditions, evidence, and criterion-level results.

2. Evaluation Scope and Objectives

The Home page was assessed as the portfolio's primary entry point, including the shared Navbar (header, skip navigation, primary navigation), main hero content (heading, introduction, decorative image, résumé link), and Footer (contact links and decorative icons). Shared components were examined on Home; limited comparisons with Resume supported the consistency checks.

Conformance target: WCAG 2.2 Level AA, including Level A requirements. **Methodological reference:** W3C WCAG-EM 2.0, used to organize the targeted assessment and reporting.

Scope exclusions: The third-party Vercel feedback widget and external destinations were not evaluated. Other portfolio pages and nested routes were outside this Home page assessment except for the specific shared-component comparisons recorded in the source reports.

3. Testing Approach and Environment

Phase	Environment and primary method
Keyboard (October 21)	Chrome on macOS; forward/reverse Tab, activation, focus, skip navigation, refresh behavior; VoiceOver off.
Semantic HTML (October 21–29)	Astro source, rendered DOM, Chrome Elements/Accessibility panels, VS Code, W3C Nu HTML Checker; VoiceOver off.
Visual / VoiceOver (October)	Chrome and Safari on macOS; CSS/source review, contrast samples, zoom, reflow, pointer testing, Safari + VoiceOver; axe DevTools and WAVE.
Automated (November 3)	Playwright with @axe-core/playwright in Chromium on the local Astro Home route at 127.0.0.1:4321, using configured WCAG A/AA rule tags.

4. Consolidated Assessment

Evaluation area	Recorded outcome	Failures
Keyboard accessibility	6 of 6 assessed criteria passed	**0**
Semantic HTML	9 of 9 assessed criteria passed; W3C validation: 0 issues	**0**
Visual, responsive and pointer	Applicable checks passed in tested/sample conditions	**0**
Safari + VoiceOver	Targeted walkthrough and announcements passed	**0**
Automated checks	Playwright: 1 pass; axe-core: 19 passed rules; 0 violations; 1 incomplete rule	**0**

5. Keyboard and Semantic HTML Results

5.1 Keyboard accessibility

All nine in-scope interactive elements were keyboard reachable, operable, and visibly focused in normal traversal. Forward/reverse navigation, link activation, focus order, skip navigation, and keyboard exit behavior passed. No keyboard traps or wholly obscured focused controls were reported.

WCAG 2.2 keyboard Success Criteria	Result
2.1.1 Keyboard; 2.1.2 No Keyboard Trap; 2.4.1 Bypass Blocks	**PASS**
2.4.3 Focus Order; 2.4.7 Focus Visible; 2.4.11 Focus Not Obscured (Minimum)	**PASS**

Keyboard report: 6 A/AA criteria passed, 0 failed; OBS-001 and OBS-002 were non-failing observations.

5.2 Semantic HTML

Source inspection and Chrome accessibility-tree review found an appropriate main landmark and skip target, page title and language, Level 1 heading, named navigation, accessible links and reading order, and decorative content treatment. The Navbar and Footer were inspected as shared components. The W3C Nu HTML Checker reported zero errors and warnings for the pasted rendered HTML.

WCAG 2.2 semantic Success Criteria	Result
1.1.1; 1.3.1; 1.3.2; 2.4.2; 2.4.4	**PASS (tested scope)**
2.4.6; 2.5.3; 3.1.1; 4.1.2	**PASS (tested scope)**

Semantic report: 9 criteria passed, 0 failures, 2 non-failing observations; Home content data tables, forms, and meaningful lists were marked N/A. Navigation list semantics were separately evaluated.

6. Visual, Pointer, Responsive and VoiceOver Results

6.1 Visual and responsive testing

Manual visual testing recorded PASS results for use of color, sampled text contrast, tested non-text contrast, 200% text resize, 320 CSS-pixel reflow, WCAG text-spacing overrides, and landscape orientation. The tested pointer-cancellation interaction passed. Eight queried first-party links met the measured target-size minimum; multipoint/path gestures and dragging were N/A.

Selected contrast measurement	Recorded ratio
Primary text #f4f1ea on #0d0f10	~17.0:1
Secondary text #d5d0c8 on #131517	~11.9:1
Strong border #686e74 on #131517	~3.55:1
320px hero: small accent text / large heading	~5.34:1 / ~5.17:1

Contrast results are scoped to measured colors and screenshot locations; the source report expressly does not claim that every photo crop or decorative border was sampled.

6.2 VoiceOver and cross-page checks

Safari with VoiceOver announced the primary navigation, four-item list, current Home state, main and hero regions, Level 1 heading, résumé/contact links, and a meaningful reading sequence. The labeled hero region caused an additional heading announcement; this was recorded as advisory, not a WCAG failure.

Cross-page checks between Home and Resume recorded scoped PASS results for Consistent Navigation (3.2.3), Consistent Identification (3.2.4), and Consistent Help (3.2.6). Multiple Ways (2.4.5) passed for the reviewed top-level page set; nested routes were not assessed.

7. Automated Accessibility Results

Two October browser scanners and a November automated page-load test supplied supporting evidence. The October axe DevTools extension scan was configured for WCAG 2.1 AA with Best Practices off; WAVE reported zero errors and zero contrast errors plus one investigated redundant-Home-link alert. Neither scanner established a confirmed WCAG failure.

Playwright / axe-core (November 3)	Recorded outcome
Home route HTTP response + test assertion	**PASS — 1 test**
axe-core passing rules	19
axe-core violated rules	**0**
axe-core incomplete rules	1 — color-contrast (9 nodes)
axe-core inapplicable rules	45

The incomplete color-contrast rule concerned six gradient-backed text elements and three arrow glyphs. It was not reported as a violation. The separate visual phase provides manual passing evidence for sampled hero text, solid backgrounds, and tested interface borders. The original reports retain the distinction between those measured results and the elements the automated tool could not resolve.

This run tested only the loaded local Home route in Chromium, not interactive states or other routes. Automated rule totals cannot establish complete WCAG conformance.

8. Confirmed Findings and Advisory Observations

Confirmed WCAG Level A/AA failures: 0 in the documented testing scope. No required remediation items were established by the four evaluations.

Source observation	Recorded disposition
Keyboard — skip link overlaps EVB branding when focused	Non-failing visual usability observation; focused skip link remains visible.
Keyboard — #main-content refresh changes first Tab destination	Non-failing fragment-navigation observation.
Semantic — single named hero region within main	Valid; additional region may be redundant; optional refinement.
Semantic — punctuation spacing in two link names	Names remain understandable; optional copy refinement.
VoiceOver — hero heading announced twice	Optional verbosity improvement; no failure confirmed.
WAVE — brand and Home nav links both target /	Investigated advisory; no WCAG failure established.
Visual — hero image/gradient contrast across crops	Measured samples passed; preserve darkening overlay as crops change.

9. Evaluation Boundaries and Final Conclusion

Results apply to the tested Home page components, browsers, viewport and visual states, assistive-technology walkthrough, and limited shared-component comparisons. The Vercel toolbar, external sites, unreviewed nested routes, and other portfolio pages were not comprehensively assessed. Automated findings describe a single loaded local page state. This report does not assert complete website or whole-page WCAG conformance.

FINAL ASSESSMENT: No confirmed WCAG 2.2 Level A/AA failures were identified in the completed, targeted Home page evaluation.

Across four complementary phases, the evidence supports positive findings for keyboard accessibility, semantic structure, tested visual and responsive behavior, and Safari with VoiceOver. Automated testing returned no detected violations. Advisory observations remain documented transparently and have not been presented as accessibility defects. This consolidated report summarizes, rather than replaces, the underlying test records.
