Portfolio Accessibility Audit — Semantic HTML Evaluation

> **Website:** Erin Van Brunt Portfolio
> **URL:** https://van-brunt-portfolio.vercel.app/
> **Evaluation Dates:** October 21–29, 2026
> **Standard:** WCAG 2.2 Level AA (target)
> **Environment:** Chrome on macOS; DevTools; VoiceOver off
> **Tools:** VS Code, Chrome Elements/Accessibility panels, W3C Nu HTML Checker
> **Evaluator:** Erin Van Brunt

1. Evaluation Scope

Targeted semantic HTML evaluation of the portfolio Home page, including the main Home component and the shared Navbar (header/navigation) and Footer. Testing reviewed the authored Astro markup, rendered HTML, computed accessible names and roles, ARIA relationships, content sequence, and Chrome's accessibility tree.

Navbar and Footer are reused throughout the portfolio; they were inspected as shared components on the Home page. The third-party Vercel feedback toolbar was excluded from accessibility assessment. The previously completed keyboard evaluation is documented separately.

2. Semantic HTML Testing Results

All inspected in-scope elements exposed appropriate semantic structure in the supplied browser evidence. No WCAG 2.2 Level A/AA failures were confirmed during this targeted semantic review.

Test	Result
Document language and descriptive page title	PASS
Home — main landmark and skip-link target	PASS
Home — H1 role, level, and accessible name	PASS
Home — named hero region and ARIA association	PASS
Home — decorative image and visual elements	PASS
Home — resume link name, role, and destination	PASS
Home — meaningful accessibility-tree reading order	PASS
Navbar — banner and labeled navigation landmark	PASS
Navbar — brand link, logo, and four-item list	PASS
Navbar — link names and current-page state	PASS
Footer — contentinfo landmark and text structure	PASS

Test	Result
Footer — contact links and decorative SVG treatment	PASS
W3C Nu HTML Checker (pasted rendered document)	PASS — 0 issues
Home content: data tables, forms, meaningful lists	NOT APPLICABLE

Selected supporting evidence

Home: The main landmark and skip target match; the H1 is exposed as a Level 1 heading with its full visually hidden and visible text; the decorative image has `alt=""`; the resume link is named “View my resume.” Chrome's accessibility tree presents the paragraph, heading, introduction, and link in a meaningful sequence.

Navbar (shared): The navigation landmark is named “Primary navigation”; the list and four list items are retained; the Blog link is named “Blog on Medium.” `aria-current="page"` correctly identified Home on the homepage and Resume on the Resume page in the tested routes.

Footer (shared): Chrome exposed a `contentinfo` landmark, ordinary statement text, and the LinkedIn and Email links. The authored SVG icons and arrows are decorative and marked to be excluded from accessible naming.

Validation: The submitted complete rendered HTML produced no errors or warnings in W3C Nu HTML Checker (vnu 26.10.18, text-input mode). HTML validity alone is not a WCAG conformance test.

3. WCAG 2.2 A/AA Semantic Assessment

Success Criterion	Level	Verdict
1.1.1 Non-text Content	A	PASS (tested scope)
1.3.1 Info and Relationships	A	PASS (tested scope)
1.3.2 Meaningful Sequence	A	PASS (tested scope)
2.4.2 Page Titled	A	PASS
2.4.4 Link Purpose (In Context)	A	PASS (tested scope)
2.4.6 Headings and Labels	AA	PASS (tested scope)
2.5.3 Label in Name	A	PASS (tested scope)
3.1.1 Language of Page	A	PASS
4.1.2 Name, Role, Value	A	PASS (tested scope)

A PASS (tested scope) means the inspected elements and states met the evaluated requirement. The table does not assert full coverage of each criterion on other pages, in untested states, or through all assistive technologies.

4. Documented Observations

OBS-SEM-001 — Named hero region inside main landmark

The Home component uses `<section aria-labelledby="hero-heading">` within its main landmark. Chrome exposed the region with the complete accessible heading name.

WCAG verdict: PASS — No violation confirmed. Because the page has one principal hero section, this extra region may be redundant, but it is valid and does not require remediation.

OBS-SEM-002 — Minor punctuation spacing in link names

The accessible names of the shared brand/home link and footer email link contain an extra space before a comma (for example, “ERIN VAN BRUNT , home”). Their destinations and purposes remain clear.

WCAG verdict: PASS — No violation confirmed. Optional copy refinement could improve spoken naturalness; no semantic failure was established.

5. Final Semantic HTML Accessibility Verdict

> **RESULT: PASS — WCAG 2.2 Level A/AA semantic HTML checks evaluated.**

The Home page and its tested shared header/navigation and footer components satisfy the semantic HTML checks documented in this evaluation. Source inspection, rendered HTML, Chrome accessibility properties and tree inspection, and supporting HTML validation identified no confirmed semantic WCAG failures.

- Applicable WCAG criteria addressed in the assessment table: **9**
- Confirmed semantic accessibility failures: **0**
- Non-failing semantic observations: **2**
- Shared components reviewed: **Navbar and Footer**

Conclusion: The Home page passes its completed targeted semantic HTML evaluation. There are no remediation requirements supported by this phase's evidence.

Limitations: This is not a full WCAG 2.2 Level AA conformance declaration. VoiceOver testing, visual contrast, responsive/reflow checks, and other criteria outside semantic HTML remain separate testing activities. The PDF report itself is a distinct document from the website evaluated.

Evaluation status: COMPLETE — SEMANTIC HTML PHASE.
